

SCANIA GUARDIAN

INSIGHTS FOR PROACTIVE REPAIRS AND IMPROVED
PRODUCTIVITY MANAGEMENT

Vehicle data, analytics and smart insights are key for proactive maintenance and repairs within our service offering – and with Scania Guardian, you can make them into an equally valuable part of your productivity management. Guardian lets you take part of some of the valuable data driven insights that are used within our most advanced proactive service and repair contracts – perfectly complementing our Flexible Maintenance service setup to ensure long-term vehicle productivity on a holistic level.

SCANIA GUARDIAN

Intelligent monitoring capabilities are core to the entire Scania services offering – and now we can offer many of these capabilities separately from the service contracts as a pure subscription model.

Through a combination of always-on connectivity, real-time health monitoring and long-term analysis insights of component wear and failures from hundreds of thousands connected Scania vehicles – our algorithms can predict component failures or replacement needs before they happen. All correlated to your individual vehicle operational circumstances and history. This lets you greatly increase your proactivity and avoid productivity affecting issues with preventative repairs and part replacements.

Whenever the Scania Guardian monitoring service identifies a risk, you will be informed and get a proposed solution to reduce the risk of unplanned stops – by instead turning them into planned ones. Our class-leading service network will always be there to consult you regarding any proposed actions, and to help you address them when needed.
